### Study Scope

#### Subject Information

Keyword(s): convictions (law), criminal histories, criminal offenses, defendants, federal courts, judicial decisions, sentencing, sentencing guidelines

#### Abstract

This collection contains information on federal criminal cases sentenced under the Sentencing Guidelines and Policy Statements of the Sentencing Reform Act of 1984. The data files include all cases received by the United States Sentencing Commission that had sentencing dates between October 1, 2005, and September 30, 2006, and were assessed as constitutional. Constitutionality compares each case's sentencing date, circuit, district, and judge to provide uniformity in reporting the cases.

#### Summary Data Description

Time Period: October 1, 2005 - September 30, 2006

## - Study 20120 -

Date(s) of Collection:	2006
Geographic Coverage:	United States
Unit of Analysis:	Federal Criminal Courts
Universe:	All cases received by the United States Sentencing Commission that had sentencing dates between October 1, 2005, and September 30, 2006, and were assessed as constitutional.
Kind of Data:	Administrative Data

### Notes

In 1999, the United States Sentencing Commission added more variables from its databases to this collection, so the data are now provided in two files. Several variables iterate to include multiple occurrences of the same event, for example, SMIN1 through SMIN247, Statutory Minimum for the First Count. Including only SMIN1 and SMIN2 captures over 99% of the valid data therefore these two were included in the Main Data File and the remaining iterations were included only in the Supplemental Data File. Part 1, Main Data File, includes all non-iterating variables plus the first 2 occurrences of each iterating variable. Part 2, Supplementary Data File, includes only the remaining iterations. This codebook should be used in reference to both data files as all variable descriptions and value labels are provided here, although supplementary iterations and Supplementary Data File column locations are not.

### Methodology and Processing

#### Data Collection Methodology

Time Method:	Cross-section
Data Collector:	United States Department of Justice. United States Sentencing Commission
Frequency of Data Collection:	Annually
Type of Research Instrument:	Structured

### Data Access

#### Dataset Availability

Location:	Inter-university Consortium for Political and Social Research
Extent of Collection:	2 data files + machine-readable documentation (PDF) + SPSS setup files

#### Data Use Statement:

Citation Requirement:	Publications based on ICPSR data collections should acknowledge those sources by means of bibliographic citations. To ensure that such source attributions are captured for social science bibliographic utilities, citations must appear in footnotes or in the reference section of publications.
Deposit Requirement:	To provide funding agencies with essential information about use of archival resources and to facilitate the exchange of information about ICPSR participants' research activities, users of ICPSR data are requested to send to ICPSR bibliographic citations for each completed manuscript or thesis abstract. Visit the ICPSR Web site for more information on submitting citations.

# *UNITED STATES SENTENCING COMMISSION*

## **VARIABLE CODEBOOK FOR INDIVIDUAL OFFENDERS**

**STANDARDIZED RESEARCH DATA FILES FOR  
FISCAL YEARS 1999 - 2006**

## INTRODUCTION

The United States Sentencing Commission collects demographic, sentencing, and guideline application information on cases which are sentenced under the guidelines in the federal court system. Understanding the federal sentencing guidelines is crucial to properly using the Commission's data. To learn more about the Commission and the federal sentencing guidelines, please visit the Commission's website, [www.ussc.gov](http://www.ussc.gov), and read through the Guideline's Manuals, Annual Reports, and Sourcebooks as well as various on-line training materials and reports. *Using multiple years worth of guideline manuals is necessary for most guideline analysis due to yearly amendments in the guidelines.*

This codebook contains information on variables which come directly from the Office of Monitoring's individual offender's database, as well as variables created specifically for research purposes. Since the Commission switched data entry systems from FoxPro to Oracle in fiscal year 1999, several significant variable and coding changes were instituted. Therefore, this codebook covers only the fiscal years since the 1999 datafile. See our older standardized research codebook for fiscal years 1991 - 1998. Datasets prior to 1991 do not contain many important guideline application variables, therefore, these datasets are not covered by either the old or the new codebook.

The first column in the codebook, NAME, lists the SAS name of the each variable in alphabetical order. Under the monitoring variable names, the corresponding research variable name (if one exists) will be listed as: R=Research variable name.

The second column, ORIGIN, lists the source of the variable. Variables are either taken from a specific documents submitted by the courts, or produced by SAS code. This column also includes information on the source document of the raw data. The following list defines the codes for variable origins.

- JC means the information for the variable is obtained solely from the Judgment and Conviction Order.
- PSR states the information for this variable comes only from the Pre-sentencing Report generated by the probation officer.
- JC/PSR indicates the information may be found either on the Judgment and Conviction Order or in the Presentencing Report, with the Judgment and Conviction Order given preference if the information conflicts.
- SOR indicates that the information for the variable is taken only from the Statement of Reasons.
- PSR/SOR means the information for this variable comes from the PSR, but the SOR information is used if it is present and/or conflicts with the PSR.
- PLEA indicates the information comes primarily from the plea agreement.
- IND indicates the information is taken mainly from the indictment/information.
- R indicates the information is generated from other coded variables via SAS code. These are referred to as the "research variables".

The third column, FORM, describes whether the variable is coded as numeric (NUM) or character

(CHAR). This column also lists the length of each variable.

The fourth column, CODES, lists all the values for each variable and describes what those values mean. Some of the variables have a large number of values, so these values are listed in the coding attachment at the end of the codebook.

The final column, DESCRIPTION, describes the uses and creation of each variable. This column also contains notes which caution users about variables which have changed definitions from previous years, or are not contained on all years of the data sets. Format statements are also included in bold at the end of each description. These formats will allow users to access the format statements in SAS from the Sun station. The user will type "FORMAT VARIABLENAME **BOLDNAME.**;" to use these format statements (Note the need for a \$ sign when formatting character variables). Since format statements cannot end in a number, all variables which end in a number "1" will have format statements that end with an "O". Variables which end with a "2" will have format statements ending in "T."

Other sections have been included after the codebook to elaborate on variable information. A code attachment which provides values of lengthy variables follows the codebook. After the code attachment, the code for creating each research variable from the monitoring variables is included. A special section containing helpful SAS fragments has also been added. Additionally, an index has been created to facilitate finding any and all references to a particular variable. Both variables names (ex. MONSEX) and subject headings (ex. GENDER) have been included.

**NEW TO THE 2006 CODEBOOK:**

- Statutory mandatory minimum months indicators such as: FIREMIN1, FIREMIN2, IDMIN, IMMIMIN, GUNMIN3, PORNMNIN, SEXMIN, and OTHRMIN
- Changes to Guideline Application from the PSR as documented on the SOR for Chapters 2-4: CHP2CHG1-CHP2CHGX, CHP2TXT1-CHP2TXTX, CHP3CHG1-CHP3CHGX, CHP3TXT1-CHP3TXTX, CHP4CHG1-CHP4CHGX, CHP4TXT1-CHP4TXTX
- Mitigating Role Cap Indicator: MITCAP
- Indicator of Sentencing Quarter within a fiscal year: QUARTER

## EXPLANATION OF THE NEW GUIDELINE CODING SYSTEM (AVAILABLE STARTING IN FY04 ):

In order to have access to more guideline cross reference information, the types and quantity of guideline-related data has somewhat changed starting in FY04. The USSC Monitoring Department codes guideline application information about four types of guidelines: Statutory, Reference, Sentencing, and Underlying.

The first guideline coded is known as the statutory guideline (GDSTAT1-GDSTATX<sup>1</sup>, GDSTATHI). This guideline is based on the statute(s) of conviction. GDSTAT is the first guideline checked for applicability by the probation officer from the statutory reference list in the back of the *USSG Manual*. All aspects of the statutory guideline are coded (i.e. base offense level and adjustments).

The next guideline is the 1<sup>st</sup> reference guideline (GDREF1-GDREFX<sup>2</sup>, GDREFHI), coded when applicable. This guideline is only used when the statutory guideline (GDSTAT) refers the probation officer to another guideline (ex. If the statute of conviction is 21:843(b), then the probation officer would go in the USSG Manual to 2D1.6 (the GDSTAT1 guideline). This guideline then refers the probation officer to 2D1.1 (the GDREF1 guideline) in order to find the correct base offense level. All aspects of the reference guideline are captured (i.e. base offense level and adjustments).

There is also an option to code a 2<sup>nd</sup> reference guideline (GDCROS1-GDCROX, GDCROSHI). A second cross reference occurs when the probation officer (PO) starts out at one guideline and gets cross-referenced to another guideline which then cross-references to a third guideline. All aspects of the cross reference guideline are coded (i.e. base offense level and adjustments).

The guideline which best explains the sentence (i.e. the last guideline which increases or decreases levels) is known as the sentencing guideline (GDLINE1-GDLINEX<sup>3</sup>, GDLINEHI). The GDLINE will be the same as the GDSTAT if no reference guideline (GDREF) is used (i.e. the probation officer begins and ends at the same guideline, and does not pick up a base offense level or any adjustments from any other guideline). All aspects of the sentencing guideline are coded (i.e. base offense level and adjustments).

Most cases do not contain any cross-references so the GDSTATHI and the GDLINEHI will be the same and the GDREFHI and the GDCROSHI will both be blank. Note that cases can have multiple guideline computations (these will not necessarily match up with the number of counts of conviction - see USSG Manual for grouping rules). The first computation is denoted with a "1" at the end of the guideline fields (i.e. GDSTAT1, GDREF1, GDCROS1, and GDLINE1). The case on the fiscal year datafile with the highest number of guideline computations determines the "top" number for the cases in that year (e.g. If in FY04 there was a case with 27 computations then all cases on the datafile would have GDSTAT1-GDSTAT27, GDREF1-GDREF27, GDCROS1-GDCROS27, and GDLINE1-GDLINE27). The "high" guideline is determined by the computation with the highest adjusted offense level (ADJOFL1-X).

---

<sup>1</sup> Prior to 1999, only five statutory guideline computations were coded.

<sup>2</sup> Prior to 1999, only five reference guideline computations were coded.

<sup>3</sup> Prior to 1999, only five sentencing guideline computations were coded.

**EXAMPLES OF THE GUIDELINE CODING SYSTEM:**

1. If the defendant was convicted of one count of selling drugs near a school, then the GDSTATHI would be §2D1.2, the GDREFHI would be §2D1.1, and the GDLINEHI would be §2D1.2. The GDCROS guideline would be blank since there was not a third cross-reference.
2. If a defendant was convicted of one count of selling drugs near a protected location while on supervised release, then the PO starts at §2J1.7 (Commission of an offense while on release) which says to go to the underlying offense. §2J1.7 is the GDSTATHI. The underlying offense (GDREFHI) is §2D1.2 (Drug Offenses near a protected location) which cross-references (GDCROSHI) the PO to §2D1.1 (Drug Trafficking) to get the offense level based on the drug quantity table. Since the PO must go back to §2J1.7 to add the 3 points from this guideline after applying both §2D1.1 and §2D1.2, then the final sentencing guideline (GDLINEHI) is §2J1.7.
