### Study Scope

### Abstract

The United States Sentencing Commission (the "Commission") is an independent agency in the judicial branch of government. Its principal purposes are 1) to establish sentencing policies and practices for the federal courts, including guidelines regarding the appropriate form and severity of punishment for offenders convicted of federal crimes; 2) to advise and assist Congress, the federal judiciary, and the executive branch in the development of effective and efficient crime policy; and 3) to collect, analyze, research, and distribute a broad array of information on federal crime and sentencing issues, serving as an information resource for Congress, the executive branch, the courts, criminal justice practitioners, the academic community, and the public.

The Commission collects and analyzes data on federal sentences to support its various activities. These data include: demographic, sentencing, and guideline application information on cases which are sentenced under the guidelines in the federal court system. This dataset contains records of guideline computations and adjustments for each count of conviction for criminal defendants who were sentenced pursuant to provisions of the Sentencing Reform Act (SRA) of 1984 and reported to the United States Sentencing Commission (USSC) during fiscal year 2012. The data files include all cases that had sentencing dates between October 1, 2011 and September 30, 2012 and were assessed as constitutional. Constitutionality compares each case's sentencing date, circuit, district and judge to provide uniformity in reporting the cases.

### Summary Data Description

*Time Period:* October 1, 2011 - September 30, 2012

*Date(s) of Collection:* October 1, 2011 - September 30, 2012

*Geographic Coverage:* United States

*Unit of Analysis:* Federal criminal cases

*Universe:* All cases received by the United States Sentencing Commission that had sentencing dates between October 1, 2011 and September 30, 2012 and were assessed as constitutional

*Kind of Data:* Event / transaction data

### Notes

In 1999, the United States Sentencing Commission added a substantial number of variables from its databases to this collection, so the data are now provided in two or more files. Several variables iterate to include multiple occurrences of the same event. Part I, Main Data, includes all noniterating variables and the highest occurrence of certain iterating variables. Part II, Supplementary Data, includes all iterating variables.

## Notes

(1) Starting with the 1999 data, ICPSR archives MONITORING OF FEDERAL CRIMINAL SENTENCES under a new study number for each year of data. Data for the years 1993-1998 are archived in MONITORING OF FEDERAL CRIMINAL SENTENCES, 1987-1998 (ICPSR 9317). (2) The data producer is the United States Sentencing Commission.

## Data Use Statement:

*Citation Requirement:* Publications based on ICPSR data collections should acknowledge those sources by means of bibliographic citations. To ensure that such attributions are captured for social science bibliographic utilities, citations must appear in footnotes or in the reference section of publications.

*Deposit Requirement:* To provide funding agencies with essential information about use of archival resources and to facilitate the exchange of information about ICPSR participants' research activities, users of ICPSR data are requested to send to ICPSR bibliographic citations for each completed manuscript or thesis abstract. Visit the ICPSR website for more information on submitting citations.

*Disclaimer:* The original collector of the data, ICPSR, and the relevant funding agency bear no responsibility for uses of this collection or for interpretations or inferences based upon such uses.

## Data Files Description

### File-by-File Description

*File Name:* Main Data File

### File Structure (rectangular)

*File Dimensions:*

- No. of Cases: 84173
- No. of Variables: 516
- Record Length: 15924

### Notes

In the variable description section for this data file, the following abbreviations are used to describe the source of the variables:

- JC means the information for the variable is obtained solely from the Judgment and Conviction Order.
- PSR states the information for this variable comes only from the Pre-sentencing Report generated by the probation officer.
- JC/PSR indicates the information may be found either on the Judgment and Conviction Order or in the Presentencing Report, with the Judgment and Conviction Order given preference if the information conflicts.
- SOR indicates that the information for the variable is taken only from the Statement of Reasons.
- PSR/SOR means the information for this variable comes from the PSR, but the SOR information is used if it is present and/or conflicts with the PSR.
- PLEA indicates the information comes primarily from the plea agreement.
- IND indicates the information is taken mainly from the indictment/information.
- R indicates the information is generated from other coded variables via SAS code. These are referred to as the "research variables".

Many variables have missing values. Missing values mean: Missing, Indeterminable, or Inapplicable.

## File-by-File Description

*File Name:* Supplemental Data File

### File Structure (rectangular)

*File Dimensions:*

- No. of Cases: 84173
- No. of Variables: 18211
- Record Length: 79268

### Notes

The supplemental data file contains many variables. However, the variables are many iterations, 1 to N (varies by year), of a relatively small number of variables. To avoid having an excessively long codebook, only the first iteration of these variables is listed. Some variables range from var1 to varN. Other variables range from var1 to varN and also include varHI. In these instances varHI is the highest level of variables var1 to varN.

### **Main Data File**

## **Variable Description**

Summary statistics (minimum, maximum, mean, median, and standard deviation) may not be available for every variable in the codebook. Conversely, a listing of frequencies in table format may not be present for every variable in the codebook either. However, all variables in the dataset are present and display sufficient information about each variable. These decisions are made intentionally and are at the discretion of the archive producing this codebook.

*Text:* Subtotal for the adjusted offense level corresponding to GDLINEX. This field is derived after all relevant SOC and chapter three adjustments have been applied. The end points for this variable are denoted with X because the total number of guideline computations recorded varies from case to case and year to year. ADOFLHI is generated from the highest sentencing guideline computation and corresponds with GDLINEX. Use the variable NOCOMP to determine how many guideline computations are present in each case. SOC information is not useful unless used in conjunction with the specific corresponding guideline.

There are up to eighteen SOC's (B thru S) applied under each Chapter Two guideline. The letter B represents the 1st SOC under the guideline, the letter C represents the second SOC, etc. Note that some guidelines may have zero SOC's and some may have up to 18. The end points for this variable are denoted with X because the total number of guideline computations recorded varies from case to case and year to year. *Location:* 6691-6695 (width: 3; decimal: 0) (Main Data File)

*Variable Type:* character

*Range of Valid Data Values:* A thru F, A1 thru F7, A1A thru F7F

*Text:* ORIGIN: PSR

*Text:* Series of labels for each SOC which corresponds to GDLINEX. This field identifies which subsection was applied within the corresponding SOC (see ADJ\_B1-ADJ\_BX etc for more information about SOCs) if applicable (some SOCs do not contain any subsections). The end points for this variable are denoted with X because the total number of guideline computations recorded varies from case to case and year to year. ADJL\_BHI thru ADJL\_SHI are generated from the highest sentencing guideline computation and corresponds with GDLINEX. The values of variables change from year to year as well as the location of the SOC (i.e. it may be the 2nd SOC in 2005 and the 3rd SOC in 2006), so AMENDYR should be referenced for all data runs. Use the variable NOCOMP to determine how many guideline computations are present in each case. SOC information is not useful unless used in conjunction with the specific corresponding guideline. Field not available prior to FY05.

The end points for this variable are denoted with X because the total number of guideline computations recorded varies from case to case and year to year. ADJC\_BHI thru ADJC\_SHI are generated from the highest cross-reference guideline computation and corresponds with GDCROSHI. The values of variables change from year to year as well as the location of the SOC (i.e. it may be the 2nd SOC in 2005 and the 3rd SOC in 2006), so AMENDYR should be referenced for all data runs. **BASLNC1 - 1:WHICH BASE OFFENSE LEVEL LINE NUMBER APPLIED**

*Location:* (width: 3 ; decimal: 0) (Supplemental Data File)

*Variable Type:* numeric

*Text:* ORIGIN: PSR

- Study 35342 -

*Text:* This field identifies which base offense level line number was applied (see BASE1- BASEX etc. for more information about BOLs) if applicable (some BOLs do not contain any line numbers). The end points for this variable are denoted with X because the total number of guideline computations recorded varies from case to case and year to year. BASLNCHI is generated from the highest cross-reference guideline computation and corresponds with GDCROSHI. Use the variable NOCOMP to determine how many guideline computations are present in each case. Not all guideline variables available prior to FY2012.

**ABUSU1 - 1:ADJUSTMENT FOR ABUSE OF POSITION OF TRUST**

*Location:* (width: 3 ; decimal: 0) (Supplemental Data File)

*Variable Type:* numeric

*Text:* ORIGIN: PSR/SOR

*Text:* Abuse of Trust (§3B1.3) Adjustment which corresponds with GDUNDR1- GDUNDRX. This field indicates the number of levels added due to the defendant's abuse of a position of trust or use of a special skill. ABUSUHI is generated from the highest 3rd reference computation and corresponds with GDUNDRHI. Use variable NOCOMP to determine how many guideline computations are present in each case.

## **VARIABLE CODEBOOK FOR INDIVIDUAL OFFENDERS**

## **STANDARDIZED RESEARCH DATA DOCUMENTATION FOR FISCAL YEARS 1999 - 2013**

## INTRODUCTION

The United States Sentencing Commission is an independent agency in the judicial branch of government. Its principal purposes are: (1) to establish sentencing policies and practices for the federal courts, including guidelines to be consulted regarding the appropriate form and severity of punishment for offenders convicted of federal crimes; (2) to advise and assist Congress and the executive branch in the development of effective and efficient crime policy; and (3) to collect, analyze, research, and distribute a broad array of information on federal crime and sentencing issues, serving as an information resource for Congress, the executive branch, the courts, criminal justice practitioners, the academic community, and the public.

Understanding the federal sentencing guidelines is crucial to properly using the Commission's data. To learn more about the Commission and the federal sentencing guidelines, please visit the Commission's website, <http://www.ussc.gov/index.cfm>. The Commission's website makes available ALL of the prior guideline manuals (<http://www.ussc.gov/Guidelines/archives.cfm>). ***Using multiple years of guideline manuals is necessary for most guideline analysis due to yearly amendments in the guidelines.***

In addition the Commission's website has publications which discuss:

This codebook contains information on variables which come directly from the individual offender's database created in the Office of Research and Data (ORD). The Commission switched data entry systems from FoxPro to Oracle in fiscal year 1999, and several significant variable and coding changes were instituted. Therefore, this codebook covers only the fiscal years since the 1999 datafile. The Commission has an older standardized research codebook for fiscal years 1991 – 1998 which is available upon request. Datasets created prior to 1991 did not contain many important guideline application variables, therefore, these datasets are not covered by either the old or the new standardized codebooks.

The Commission's most current ten years of datafiles are available for download in either SPSS or SAS formats at [http://www.ussc.gov/Research\\_and\\_Statistics/Datafiles/index.cfm](http://www.ussc.gov/Research_and_Statistics/Datafiles/index.cfm).

## How to Use the USSC Codebook

The first column in the codebook, NAME, lists the name of the each variable in alphabetical order. Under the variable names, the corresponding research variable name (if one exists) will be listed as: R=Research variable name. The research variables are generally those used in the Commission's publications such as the *Sourcebook of Federal Sentencing Statistics*.

The second column, ORIGIN, lists the source of the variable. Variables are either taken from a specific documents submitted by the courts, or produced by ORD based on data collected from the source documents. This column also includes information on the source document of the raw data. The following list defines the codes for variable origins.

- JC means the information for the variable is obtained solely from the Judgment and Conviction Order.
- PSR states the information for this variable comes only from the Pre-sentencing Report generated by the probation officer.
- JC/PSR indicates the information may be found either on the Judgment and Conviction Order or in the Presentencing Report, with the Judgment and Conviction Order given preference if the information conflicts.
- SOR indicates that the information for the variable is taken only from the Statement of Reasons.
- PSR/SOR means the information for this variable comes from the PSR, but the SOR information is used if it is present and/or conflicts with the PSR.
- PLEA indicates the information comes primarily from the plea agreement.
- IND indicates the information is taken mainly from the indictment/information.
- R indicates the information is generated from other variables. These are referred to as the "research variables".

The third column, FORM, describes whether the variable is coded as numeric (NUM), character (CHAR), or date (DATE). This column also lists the length of each variable.

The fourth column, CODES, lists all the values for each variable and describes what those values mean. Some of the variables have a large number of values, so these values are listed in Attachment A at the end of the codebook.

The final column, DESCRIPTION, describes the uses and creation of each variable. This column also contains notes which caution users about variables which have changed definitions from previous years, or are not contained on all years of the data sets. Format statements are also included in bold at the end of each description. These formats will allow users to access the format statements. Since SAS format statements cannot end in a number, all variables which end in a number "1" will have format statements that end with an "O". Variables which end with a "2" will have format statements ending in "T."

Attachments have been included at the back of the codebook to elaborate on variable information. A code attachment which provides values of lengthy variables follows the codebook. ***An index is also included to assist in finding variable names by subject.***

**NEW TO THE 2013 CODEBOOK:**

- Added the variables HUMAN1-HUMANX, HUMANHI, HUMANS1-HUMANSX, HUMANSHI, HUMANR1-HUMANRX, HUMANRHI, HUMANC1-HUMANCX, HUMANCHI, HUMANU1-HUMANUX, and HUMANUHI which detail information about the application of §3A1.5 (Serious Human Rights Offense).
- Added the variables HUMLB1-HUMLBX, HUMLBHI, HUMLBS1-HUMLBSX, HUMLBSHI, HUMLBR1-HUMLBRX, HUMLBRHI, HUMLBC1-HUMLBCX, HUMLBCHI, HUMLBU1-HUMLBUX, and HUMLBUHI which detail information about the labels application of §3A1.5 (Serious Human Rights Offense).

## EXPLANATION OF THE CURRENT GUIDELINE CODING SYSTEM

In order to have access to more guideline cross reference information, the types and quantity of guideline-related data changed in FY2004. From FY2004 through FY2011, Commission staff record guideline application information about four types of guidelines: Statutory, Reference, 2<sup>nd</sup> Cross-Reference, and Sentencing. In FY2012, a third Cross-Reference Guideline was added. Please See Chapter One in the USSG Manual ([http://www.ussc.gov/Guidelines/2012\\_Guidelines/Manual\\_PDF/Chapter\\_1.pdf](http://www.ussc.gov/Guidelines/2012_Guidelines/Manual_PDF/Chapter_1.pdf)) for more information about the federal guideline system, determining the appropriate guideline, and guideline application order.

The first guideline coded is known as the statutory guideline (GDSTAT1-GDSTATX, GDSTATHI). This guideline is based on the statute(s) of conviction. GDSTAT is the first guideline checked for applicability by the probation officer from the statutory reference list in the back of the *USSG Manual*. All aspects of the statutory guideline are coded (i.e. base offense level and adjustments).

The next guideline is the 1<sup>st</sup> reference guideline (GDREF1-GDREFX, GDREFHI), coded when applicable. This guideline is only used when the statutory guideline (GDSTAT) refers the probation officer to another guideline (ex. If the statute of conviction is 21:843(b), then the probation officer would go in the USSG Manual to 2D1.6 (the GDSTAT1 guideline). This guideline then refers the probation officer to 2D1.1 (the GDREF1 guideline) in order to find the correct base offense level. All aspects of the reference guideline are captured (i.e. base offense level, specific offense characteristics, and chapter three adjustments).

There is also an option to code a 2<sup>nd</sup> reference guideline (GDCROS1-GDCROX, GDCROSHI). A second cross reference occurs when the probation officer (PO) starts out at one guideline and gets cross-referenced to another guideline which then cross-references to a third guideline. All aspects of the cross reference guideline are coded (i.e. base offense level, specific offense characteristics, and chapter three adjustments).

The fourth guideline captured is the 3<sup>rd</sup> reference guideline (GDUNDR1-GDUNDRX, GDUNDRHI). A second cross reference occurs when the probation officer (PO) starts out at one guideline and gets cross-referenced to a 2<sup>nd</sup> guideline which then cross-references to a 3<sup>rd</sup> guideline, and then a 4<sup>th</sup> guideline. All aspects of the 3<sup>rd</sup> cross reference guideline are coded (i.e. base offense level, specific offense characteristics, and chapter three adjustments).

The guideline which best explains the sentence (*i.e.*, the last guideline which increases or decreases the offense level) is known as the sentencing guideline (GDLIN1-GDLINX, GDLINHI). The GDLIN will always be the same as one of the other three guidelines (GDSTAT, GDREF, or GDCROS). The GDLIN will be the same as the GDSTAT if no reference guideline (GDREF) is used. All aspects of the sentencing guideline are coded (i.e. base offense level, specific offense characteristics, and chapter three adjustments). Most cases do not contain any cross-references so the GDSTATHI and the GDLINHI will be the same and the GDREFHI and the GDCROSHI will both be blank.

Note that cases can have multiple guideline computations (these will not necessarily match up with the number of counts of conviction - see USSG Manual for grouping rules). The first computation is denoted with a "1" at the end of the guideline fields (i.e. GDSTAT1, GDREF1, GDCROS1, GDUNDR1, and GDLIN1). The case on the fiscal year datafile with the largest number of guideline computations determines the "top" number for the cases in that year (e.g. If in FY2004 there was a case with 27 computations then all cases on the datafile would have GDSTAT1-GDSTAT27, GDREF1-GDREF27, GDCROS1-GDCROS27, and GDLIN1-GDLIN27). **Since the "top" or highest number of computations changes every year, the guideline variable names end in "X". Users can view the variable NOCOMP (number of computations) to determine how many computations occurred in each case as well as the "top" number for a given year.**

The "high" or primary guideline is determined by the computation with the highest adjusted offense level for the sentencing guideline (ADJOFL1-X) and is called GDLINHI. GDLINHI is often used as selection criteria in the Commission's data and research publications.

**EXAMPLES OF THE GUIDELINE CODING SYSTEM:**

1. If the defendant was convicted of one count of selling drugs near a school, then the GDSTAT1 would be §2D1.2, the GDREF1 would be §2D1.1, and the GDLIN1 would be §2D1.2. The GDCROS1 and GDUNDR1 guidelines would be blank since there was not another cross-reference. The GDLIN1 would be §2D1.2 since this guideline adds levels to the underlying offense levels from §2D1.1, so §2D1.2 is the primary sentencing guideline.

2. If a defendant was convicted of one count of selling drugs near a protected location while on supervised release, then the PO starts at §2J1.7 (Commission of an offense while on release) which says to go to the underlying offense. §2J1.7 is the GDSTAT1. The underlying offense (GDREF1) is §2D1.2 (Drug Offenses near a protected location) which cross-references (GDCROSHI) the PO to §2D1.1 (Drug Trafficking) to get the offense level based on the drug quantity table. The GDUNDR1 variable will be blank since there is not another cross-reference guideline. Since the PO must go back to §2J1.7 to add the 3 points from this guideline after applying both §2D1.1 and §2D1.2, then the final sentencing guideline (GDLIN1) is §2J1.7.

**COLOR CODING CONVENTIONS FOR GUIDELINE COMPUTATION VARIABLES:**

The variable name column in the codebook uses the following color convention for variables associated with the guideline application: black text for the sentencing variables, red text for the statutory variables, blue text for the reference variables, green text for the cross-reference variables, and purple text for the 3<sup>rd</sup> reference variables. Here is an example for the variable Abuse of Position:

ABUS1-ABUSX,  
ABUSHI  
ABUSS1-ABUSSX,  
ABUSSHI  
ABUSR1-ABUSRX,  
ABUSRHI  
ABUSC1-ABUSCX,  
ABUSCHI  
ABUSU1-ABUSUX,  
ABUSUHI

When doing a guideline analysis, choose variables that correspond to one another. For example, if the analysis is using the primary sentencing guideline (GDLIN1), then choose the corresponding base offense level variable for the primary sentencing guideline (BASE1). *Pairing non-corresponding variables (ex. Primary sentencing guideline (GDLIN1) with the primary reference base offense level (BASERHI)), will result in incorrect analyses.*

## **Appendix B: Explanation of USSC Sentencing Variables**

USSC collects sentence information for each individual offender. The first type of sentence information collected is time imposed. Time imposed is a sentence that the offender has yet to serve. It is collected as the total number of imposed months (TOTPRISN) and the total number of imposed days (TOTDAYS). Courts can also impose a sentence of time that has already been served (generally while awaiting sentencing – ex. Offender is held in jail without bond). Time served is collected as the total number of time served months (TIMSERVM) and the total number of time served days (TIMSERVD). The court may also grant credit for time served on a related state sentence under provision §5G1.3 of USSG. The §5G1.3 credit is collected as the total number of months (CH5G13ST). USSC also records the number of months imposed for alternative confinement such as home detention (MOHOMDET), intermittent confinement (MOINTCON), and community confinement (MOCOMCON).

The number of months of probation is recorded in a separate field (PROBATN). For more information about types of confinement and sentencing zones, please see Chapter Five of the *USSG Manual*.

***USSC also creates four sentencing variables that combine the information from all of the above fields.*** These four combination sentencing variables are used in the Commission’s publications such as the *Sourcebook of Federal Sentencing Statistics*. All four of the combination sentencing variables add together all of the prison time imposed, time served and §5G1.3 months.

The first of these created combination sentence variables captures information on the length of imprisonment, but it excludes all months of alternative confinement as well as sentences of probation (SENTTOT). Any months of alternative confinement or probation are not added into SENTTOT. If an offender had a sentence of four months of prison and four months of home detention, then SENTTOT would have a value of four (the alternative months are not added in to the total). A sentence of two years of probation would have a value of missing or “.” for SENTTOT (*i.e.*, Sentences of probation only are not included at all in sentence length averages using SENTTOT).

The second variable captures information on the length of imprisonment as well as sentences of probation, but it excludes all months of alternative confinement (SENTTOT0). Any months of alternative confinement or probation are reported in SENTTOT0 as zero months. If an offender had four months of prison and four months of home detention, then SENTTOT0 would have a value of four (the alternative months are not added in to the total). A sentence of two years of probation only would have a value of zero for SENTTOT0 (*i.e.*, Sentences of probation only are included as zero months when doing a sentence average using SENTTOT0).

The third variable captures information on the length of imprisonment and alternative confinement, but it excludes sentences of probation (SENSPLT). If an offender had four months of prison and four months of home detention, then SENSPLT would have a value of eight (the alternative months are added in to the total). A sentence of two years of probation only would have a value of missing or “.” for SENSPLT (*i.e.*, Sentences of probation only are not included at all in sentence length averages using SENSPLT).

The last of the four created sentence variables captures information on the length of imprisonment, the months of alternative confinement, and sentences of probation (SENSPLT0). Any months of alternative confinement are reported in SENSPLT0. If an offender had a sentence of four months of prison and four months of home detention, then SENSPLT0 would have a value of eight (the alternative months are added in to the total). A sentence of two years of probation only would have a value of zero for SENSPLT0 (*i.e.*, Sentences of probation only are included as zero months when doing a sentence average using SENSPLT0).

In general it is up to the user to choose which of the four combination sentencing variables is best for a specific analysis. Performing a frequency of the variable SENTIMP will allow users to determine the percentage of cases which have alternative sentences or probation sentences. Knowing that information should better inform users about which sentencing variable to use.
