Study Scope

Abstract

The United States Sentencing Commission (the "Commission") is an independent agency in the judicial branch of government. Its principal purposes are 1) to establish sentencing policies and practices for the federal courts, including guidelines regarding the appropriate form and severity of punishment for offenders convicted of federal crimes; 2) to advise and assist Congress, the federal judiciary, and the executive branch in the development of effective and efficient crime policy; and 3) to collect, analyze, research, and distribute a broad array of information on federal crime and sentencing issues, serving as an information resource for Congress, the executive branch, the courts, criminal justice practitioners, the academic community, and the public.

The Commission collects and analyzes data on federal sentences to support its various activities. These data include: demographic, sentencing, and guideline application information on cases which are sentenced under the guidelines in the federal court system. This dataset contains records of guideline computations and adjustments for each count of conviction for criminal defendants who were sentenced pursuant to provisions of the Sentencing Reform Act (SRA) of 1984 and reported to the United States Sentencing Commission (USSC) during fiscal year 2008. The data files include all cases that had sentencing dates between October 1, 2007 and September 30, 2008 and were assessed as constitutional. Constitutionality compares each case's sentencing date, circuit, district and judge to provide uniformity in reporting the cases.

Summary Data Description

Time Period:	October 1, 2007 - September 30, 2008
Date(s) of Collection:	October 1, 2007 - September 30, 2008
Geographic Coverage:	United States
Unit of Analysis:	Federal criminal cases
Universe:	All cases received by the United States Sentencing Commission that had sentencing dates between October 1, 2007 and September 30, 2008 and were assessed as constitutional
Kind of Data:	Event / transaction data

Notes

- 5 -

In 1999, the United States Sentencing Commission added a substantial number of variables from its databases to this collection, so the data are now provided in two files. Several variables iterate to include multiple occurrences of the same event. Part I, Main Data, includes all noniterating variables and the highest occurrence of certain iterating variables. Part II, Supplementary Data, includes all iterating variables.

Notes

(1) Starting with the 1999 data, ICPSR archives MONITORING OF FEDERAL CRIMINAL SENTENCES under a new study number for each year of data. Data for the years 1993-1998 are archived in MONITORING OF FEDERAL CRIMINAL SENTENCES, 1987-1998 (ICPSR 9317). (2) The data producer is the United States Sentencing Commission.

Citation Requirement: Publications based on ICPSR data collections should acknowledge those sources by means of bibliographic citations. To ensure that such attributions are captured for social science bibliographic utilities, citations must appear in footnotes or in the reference section of publications.

Deposit Requirement: To provide funding agencies with essential information about use of archival resources and to facilitate the exchange of information about ICPSR participants' research activities, users of ICPSR data are requested to send to ICPSR bibliographic citations for each completed manuscript or thesis abstract. Visit the ICPSR website for more information on submitting citations.

Data Files Description

File-by-File Description

File Name: Main Data File

File Structure (rectangular)

File Dimensions:

- No. of Cases: 76,478
- No. of Variables: 406
- Record Length: 11,117

Notes

In the variable description section for this data file, the following abbreviations are used to describe the source of the variables:

- JC means the information for the variable is obtained solely from the Judgment and Conviction Order.
- PSR states the information for this variable comes only from the Pre-sentencing Report generated by the probation officer.
- JC/PSR indicates the information may be found either on the Judgment and Conviction Order or in the Presentencing Report, with the Judgment and Conviction Order given preference if the information conflicts.
- SOR indicates that the information for the variable is taken only from the Statement of Reasons.
- PSR/SOR means the information for this variable comes from the PSR, but the SOR information is used if it is present and/or conflicts with the PSR.
- PLEA indicates the information comes primarily from the plea agreement.
- IND indicates the information is taken mainly from the indictment/information.
- R indicates the information is generated from other coded variables via SAS code. These are referred to as the "research variables".

Many variables have missing values. Missing values mean: Missing, Indeterminable, or Inapplicable.

File-by-File Description

File Name: Supplemental Data File

File Structure (rectangular)

File Dimensions:
- No. of Cases: 76,478
- No. of Variables: 14,932
- Record Length: 52,606

Notes

The supplemental file contains many variables. However, the variables are many iterations, 1 to N (varies by year), of a relatively small number of variables. To avoid having an excessively long codebook, only the first iteration of these variables is listed. Some variables range from var1 to varN. Other variables range from var1 to varN and also include varHI. In these instances varHI is the highest level of variables var1 to varN.

Notes

In the variable description section for this data file, the following abbreviations are used to describe the source of the variables:

- JC means the information for the variable is obtained solely from the Judgment and Conviction Order.
- PSR states the information for this variable comes only from the Pre-sentencing Report generated by the probation officer.
- JC/PSR indicates the information may be found either on the Judgment and Conviction Order or in the Presentencing Report, with the Judgment and Conviction Order given preference if the information conflicts.
- SOR indicates that the information for the variable is taken only from the Statement of Reasons.
- PSR/SOR means the information for this variable comes from the PSR, but the SOR information is used if it is present and/or conflicts with the PSR.
- PLEA indicates the information comes primarily from the plea agreement.
- IND indicates the information is taken mainly from the indictment/information.
- R indicates the information is generated from other coded variables via SAS code. These are referred to as the "research variables".

Variable Type:	numeric (ISO)
Range of Valid Data Values:	-20 thru 90
Text:	ORIGIN: PSR

Text: Series of Specific Offense Characteristics (SOCs) which corresponds to GDLINE1-GDLINEX. These SOCs will add or subtract levels from the corresponding base offense level (BOL). There are up to fourteen SOC's (B thru P) applied under each Chapter Two guideline. The letter B represents the 1st SOC under the guideline, the letter C represents the second SOC, etc. Note that some guidelines may have zero SOCs and some may have up to 14. The end points for this variable are denoted with X because the total number of guideline computations recorded varies from case to case and year to year. ADJ_BHI thru ADJ_PHI are generated from the highest sentencing guideline computation and corresponds with GDLINEHI. The values of variables change from year to year as well as the location of the SOC (i.e. it may be the 2nd SOC in 2005 and the 3rd SOC in 2006), so AMENDYR should be referenced for all data runs. Use the variable NOCOMP to determine how many guideline computations are present in each case. SOC information is not useful unless used in conjunction with the specific corresponding guideline.

Text:	The dollar amount attributed to loss involved corresponding to GDLINE1- GDLINEX. Amounts are rounded off to the nearest whole dollar. Cases not involving dollar loss (ex. Drug cases) are coded as zero for the amount. LOSSHI is generated from the highest sentencing guideline computation and corresponds with GDLINEHI. The end points for this variable are denoted with X because the total number of guideline computations recorded varies from case to case and year to year. Use variable NOCOMP to determine how many guideline computations are present in each case.

The values of variables change from year to year as well as the location of the SOC (i.e. it may be the 2nd SOC in 2005 and the 3rd SOC in 2006), so AMENDYR should be referenced for all data runs. Use the variable NOCOMP to determine how many guideline computations are present in each case. SOC information is not useful unless used in conjunction with the specific corresponding guideline. Field not available prior to FY05.

UNITED STATES SENTENCING COMMISSION

VARIABLE CODEBOOK FOR
INDIVIDUAL OFFENDERS

STANDARDIZED RESEARCH DATA FILES FOR
FISCAL YEARS 1999 - 2008

INTRODUCTION

The United States Sentencing Commission collects demographic, sentencing, and guideline application information on cases which are sentenced under the guidelines in the federal court system. Understanding the federal sentencing guidelines is crucial to properly using the Commission's data. To learn more about the Commission and the federal sentencing guidelines, please visit the Commission's website, www.ussc.gov, and read through the Guideline's Manuals, Annual Reports, and Sourcebooks as well as various on-line training materials and reports. ***Using multiple years worth of guideline manuals is necessary for most guideline analysis due to yearly amendments in the guidelines.***

This codebook contains information on variables which come directly from the Office of Monitoring's individual offender's database, as well as variables created specifically for research purposes. Since the Commission switched data entry systems from FoxPro to Oracle in fiscal year 1999, several significant variable and coding changes were instituted. Therefore, this codebook covers only the fiscal years since the 1999 datafile. See our older standardized research codebook for fiscal years 1991 - 1998. Datasets prior to 1991 do not contain many important guideline application variables, therefore, these datasets are not covered by either the old or the new codebook.

The first column in the codebook, NAME, lists the SAS name of the each variable in alphabetical order. Under the monitoring variable names, the corresponding research variable name (if one exists) will be listed as: R=Research variable name.

The second column, ORIGIN, lists the source of the variable. Variables are either taken from a specific documents submitted by the courts, or produced by SAS code. This column also includes information on the source document of the raw data. The following list defines the codes for variable origins.

• JC means the information for the variable is obtained solely from the Judgment and Conviction Order.

• PSR states the information for this variable comes only from the Pre-sentencing Report generated by the probation officer.

• JC/PSR indicates the information may be found either on the Judgment and Conviction Order or in the Presentencing Report, with the Judgment and Conviction Order given preference if the information conflicts.

• SOR indicates that the information for the variable is taken only from the Statement of Reasons.

• PSR/SOR means the information for this variable comes from the PSR, but the SOR information is used if it is present and/or conflicts with the PSR.

• PLEA indicates the information comes primarily from the plea agreement.

• IND indicates the information is taken mainly from the indictment/information.

• R indicates the information is generated from other coded variables via SAS code. These are referred to as the "research variables".

The third column, FORM, describes whether the variable is coded as numeric (NUM) or character

(CHAR). This column also lists the length of each variable.

The fourth column, CODES, lists all the values for each variable and describes what those values mean. Some of the variables have a large number of values, so these values are listed in the coding attachment at the end of the codebook.

The final column, DESCRIPTION, describes the uses and creation of each variable. This column also contains notes which caution users about variables which have changed definitions from previous years, or are not contained on all years of the data sets. Format statements are also included in bold at the end of each description. These formats will allow users to access the format statements in SAS from the Sun station. The user will type "FORMAT VARIABLENAME BOLDNAME.;" to use these format statements (Note the need for a $ sign when formatting character variables). Since format statements cannot end in a number, all variables which end in a number "1" will have format statements that end with an "O". Variables which end with a "2" will have format statements ending in "T."

Other sections have been included after the codebook to elaborate on variable information. A code attachment which provides values of lengthy variables follows the codebook. After the code attachment, the code for creating each research variable from the monitoring variables is included. A special section containing helpful SAS fragments has also been added. Additionally, an index has been created to facilitate finding any and all references to a particular variable. Both variables names (ex. MONSEX) and subject headings (ex. GENDER) have been included.

NEW TO THE 2008 CODEBOOK:

- RELMIN - Represents mandatory minimum sentence (in months) associated with convictions under 18 U.S.C. §3147 (Penalty for Offense Committed While on Release).
- KIMBPOST - Dummy variable which separates cases into the pre and post-Kimbrough (Supreme Court case) time periods
- BOOKER2 and BOOKER3 - Collapsed versions of BOOKERCD used in various USSC reports

EXPLANATION OF THE NEW GUIDELINE CODING SYSTEM
(AVAILABLE STARTING IN FY04):

In order to have access to more guideline cross reference information, the types and quantity of guideline-related data has somewhat changed starting in FY04. The USSC Monitoring Department codes guideline application information about four types of guidelines: Statutory, Reference, Sentencing, and Underlying.

The first guideline coded is known as the statutory guideline (GDSTAT1-GDSTATX[1], GDSTATHI). This guideline is based on the statute(s) of conviction. GDSTAT is the first guideline checked for applicability by the probation officer from the statutory reference list in the back of the *USSG Manual*. All aspects of the statutory guideline are coded (i.e. base offense level and adjustments).

The next guideline is the 1st reference guideline (GDREF1-GDREFX[2], GDREFHI), coded when applicable. This guideline is only used when the statutory guideline (GDSTAT) refers the probation officer to another guideline (ex. If the statute of conviction is 21:843(b), then the probation officer would go in the USSG Manual to 2D1.6 (the GDSTAT1 guideline). This guideline then refers the probation officer to 2D1.1 (the GDREF1 guideline) in order to find the correct base offense level. All aspects of the reference guideline are captured (i.e. base offense level and adjustments).

There is also an option to code a 2nd reference guideline (GDCROS1-GDCROSX, GDCROSHI). A second cross reference occurs when the probation officer (PO) starts out at one guideline and gets cross-referenced to another guideline which then cross-references to a third guideline. All aspects of the cross reference guideline are coded (i.e. base offense level and adjustments).

The guideline which best explains the sentence (i.e. the last guideline which increases or decreases levels) is known as the sentencing guideline (GDLINE1-GDLINEX[3], GDLINEHI). The GDLINE will be the same as the GDSTAT if no reference guideline (GDREF) is used (i.e. the probation officer begins and ends at the same guideline, and does not pick up a base offense level or any adjustments from any other guideline). All aspects of the sentencing guideline are coded (i.e. base offense level and adjustments).

Most cases do not contain any cross-references so the GDSTATHI and the GDLINEHI will be the same and the GDREFHI and the GDCROSHI will both be blank. Note that cases can have multiple guideline computations (these will not necessarily match up with the number of counts of conviction - see USSG Manual for grouping rules). The first computation is denoted with a "1" at the end of the guideline fields (i.e. GDSTAT1, GDREF1, GDCROS1, and GDLINE1). The case on the fiscal year datafile with the highest number of guideline computations determines the "top" number for the cases in that year (e.g. If in FY04 there was a case with 27 computations then all cases on the datafile would have GDSTAT1-GDSTAT27, GDREF1-GDREF27, GDCROS1-GDCROS27, and GDLINE1-GDLINE27). The "high" guideline is determined by the computation with the highest adjusted offense level (ADJOFL1-X).

---

[1] Prior to 1999, only five statutory guideline computations were coded.

[2] Prior to 1999, only five reference guideline computations were coded.

[3] Prior to 1999, only five sentencing guideline computations were coded.

EXAMPLES OF THE GUIDELINE CODING SYSTEM:

1. If the defendant was convicted of one count of selling drugs near a school, then the GDSTATHI would be §2D1.2, the GDREFHI would be §2D1.1, and the GDLINEHI would be §2D1.2. The GDCROS guideline would be blank since there was not a third cross-reference.

2. If a defendant was convicted of one count of selling drugs near a protected location while on supervised release, then the PO starts at §2J1.7 (Commission of an offense while on release) which says to go to the underlying offense. §2J1.7 is the GDSTATHI. The underlying offense (GDREFHI) is §2D1.2 (Drug Offenses near a protected location) which cross-references (GDCROSHI) the PO to §2D1.1 (Drug Trafficking) to get the offense level based on the drug quantity table. Since the PO must go back to §2J1.7 to add the 3 points from this guideline <u>after</u> applying both §2D1.1 and §2D1.2, then the final sentencing guideline (GDLINEHI) is §2J1.7.
